

Plate Tectonics Study Guide

This Thursday you will have the astronomy final. Study the following:

- 1. How to determine the latitude and longitude on a world map*
- 2. Calculating density and applying it to plate tectonics*
- 3. Identify each layer of Earth and how it plays a part in plate tectonics*
- 4. The process of convection and how it influences the Earth's features*
- 5. Reading a plate boundary map and making inferences from it*
- 6. Identifying the structures that form at different plate boundaries*
